FIRE DETECTION & FIRE ALARM SYSTEMS

Ferasa is able to plan and construct a proper system, including high quality devices through its partnership with European manufacturers, this partnership allows Ferasa to plan in a highly flexible manner and work according to customer requirements. In addition to selecting the right type of detector, the correct engineering method is also extremely important. A high quality detector that has been installed in the wrong place will not achieve the desired effect.. Ferasa offers highly qualified and experienced technicians to correctly position the detectors ; Ferasa therefore ensures that all areas and applications are covered.

CEO'S MESSAGE

Today, proudly, I see Ferasa Company growing and progressing after succeeding in all works masterly performed, Thanks to the efforts of all the employees and the strategies that the company chose to transfer the knowledge, choosing the utmost better specialized partners, the highest technologies and providing after sales services by specialized staff and modern workshops.

FERASA is providing distinct technical services in the fields of industry and oil, the company is providing solutions for the industrial security problems based on methodology and scientific plan.

Since the establishment of my company, I have invested on the right build and I worked hardy to keep clear imprints and illuminated signs that will guide the company staff to progress in the way of leadership and success.

President Zuhir Abdulalam Almntasar

ABOUT US

Emerged... as the most recent sister company in FERASA Group, comes with even broader activity range that spans all essential six oilfield technical. Its activities are integrated with the international arm of he Group, Ferasa Int'l Trading and Construction Co.Ltd. and Ferasa Tasharukia. Over the years... FERASA Int'l has acquired extensive business services that are growing steadily and what once a typically local supplier has become a company that regards the entire Libya and across the border as its market place. Today, FERASA represents partners from Europe serving around 300 clients worldwide. This trend is continuing and whenever a new project requiring oil & gas field technical services emerges FERASA is on hand. The company therefore places great emphasis of finding working partners and product suppliers abroad who can meet these important work standards. All these efforts invested to improve our quality of work are rewarded with satisfied customers who come back year after year.

MAKING SAFETY A TOP **PRIORITY**

FIRE EXTINGUISHING SOLUTIONS

Fire is one of the most dangerous accidents that can occur and affect the human life but all fires are not the same. Since the big variety of combustibles that exists, different types of fire can take place and that is why many technologies of fire fighting are available.

Ferasa can provide its customers all the extinguishing technologies from sprinklers, gas suppression systems, water mist systems to portable extinguishers and can also offer a highly secured solution that answers perfectly to the customer's requirements. Through the big range of products and brands Ferasa provide its customers a complete fire fighting solution.

SAFETY EQUIPMENTS

RESCUE EQUIPMENTS | EVACUATION SIGNS

WORKPLACE SAFETY has different definitions for different environments. Whatever safety means for your role, Ferasa helps you to achieve it. We provide high quality, reliable products that you can trust to keep employees and sites safe.

RESCUE EQUIPMENTS technology is our source for technical extrication gear such as support packs and bags, steel cable cutters, sharp edge protections covers and more. All products at Ferasa are of the highest quality and products by the best manufactures in the industry.

EVACUATION SIGNS are a critical part of an emergency strategy and proper signage is mandated for all fire doors and fire exits. Ferasa provide all emergency exit signs including photo luminescent exit signs, fire door signs and fire exit signs with a variety of sizes and materials.

In an emergency situation such as fire, it is essential that people are evacuated safely and in the shortest possible time. Electronic sounders and bells are commonly used as fire alarm warnings; however research has shown that people are less likely to react to these than those presented with a clear and easily understood message. Ferasa ensures the installation of high quality products and its integration to the fire alarming system to offer a complete and safe solution to its customers.

AREA OF USE

Airports
Commercial Buildings
Administrations
Hospitals

Emergency lighting is designed to automatically operate in the event of a complete mains power failure, to prevent panic and allow safe passage out of enclosed areas in the event of an emergency situation such as fire.

The system should be correctly designed, installed and regularly maintained. Ferasa offers a wide range of emergency lights to its customers through a professional team and in partnership with European brands.
